

## Climate Change Policy (Since 2021)

---

With the increased focus on climate change becoming more prevalent amongst public and policymakers, a transition towards a low-carbon economy is essential for the long-term wellbeing of the planet. As an eco-conscious property developer, Lagenda Properties Berhad (“Lagenda” or the “Group”) and its Board of Directors recognises the role it has in mitigating the impacts of climate change. This Policy has been established to inform the decision-making process regarding the Group’s climate strategy and action plan.

Lagenda acknowledges the scientific consensus of human-induced climate change reported by the United Nations Intergovernmental Panel on Climate Change (IPCC). The Group is committed to support the outcomes of the Paris Climate Agreement and its long-term goal of reducing global average temperature increase to below 2°C, with further aspirations to limit the increase to 1.5°C. We are aware that effective climate action requires the cooperation of all parties and actively encourage our stakeholders to support our climate change agenda to take actions that lead to low-carbon emissions.

As a carbon-intensive industry, the Group’s contribution towards a low carbon economy will continue to evolve and adapt, to overcome any challenges posed. Such actions may include but are not limited to:

- a. Encourage measures for efficient energy consumption in our operations
- b. Set targets to reduce our operational carbon emissions.
- c. Monitoring of the Group’s energy and carbon emissions to track our sustainability performance.
- d. Collaborating with relevant stakeholders for climate change prevention initiatives.
- e. Encourage supply chain partners to implement best practices.

This Policy has been approved by the Board of Directors on 5 January 2022.
